(a) Stellar-mass evolution

$M_\star / M_{\star,\mathrm{pre-infall}}$

Time since infall [Gyr]

(b) Size evolution

$R_{50} / R_{50,\mathrm{pre-infall}}$

Time since infall [Gyr]

(c) Pre-infall to $z = 0$ evolution

$\Delta \log_{10}(R_{50})$

$\Delta \log_{10}(M_\star)$

constant compactness

(d) Post-infall stellar-mass loss

median = 6.1\%

Number of galaxies

Stellar-mass loss from $M_{\star,\mathrm{peak,pre-infall}}$ [%]
