
(a) Stellar-mass evolution
median (16th--84th percentile; $z=0$: 0.94)
$M_\star / M_{\star,\mathrm{peak,pre-infall}}$
Time since infall [Gyr]
(b) Size evolution
median (16th--84th percentile; $z=0$: 1.77)
$R_{50}/R_{50,\mathrm{peak,pre-infall}}$
Time since infall [Gyr]
(c) Peak pre-infall to $z=0$ evolution
median $\Delta\log M_\star = -0.03$ dex
median $\Delta\log R_{50} = 0.25$ dex
median $\Delta\Sigma_{1.5} = -0.36$ dex
median $f_{\mathrm{loss}} = 6.1\%$
constant compactness
$\Delta\log_{10}(R_{50})$
$\Delta\log_{10}(M_\star)$
$\Delta\log_{10}\Sigma_{1.5}$ [dex]
